About Sanidumps.com

The web site www.sanidumps.com was created in 2006 by **founder John Clarke** with the explicit goal of improving the lifestyle of RVers and helping the environment. Today the site lists over 18,500 dump stations in the USA, Canada, Australia, New Zealand, Mexico, Central America and a few other countries.

The Sanidumps team includes Chris Clarke who helps John managing the listings, KC Chavda who handles the marketing, sales and RV presentations, Karen Chavda who handles all the editing of RV articles while keeping us organized in general. John Clarke is our resident IT expert and brings additional technical expertise in fixing common RV issues such as 12 volt DC electrical systems and solar power. He is also very knowledgeable about RVing during winter climates.

As RVer's ourselves, we try to make as much time as possible for RVing and to meeting fellow RVers in order to exchange ideas, best practices and down a few cold ones.

The year 2021 has been a very successful one. We updated many dump sites with GPS coordinates, and our growth of RVers using our website to find dump stations continues! Many of our updates resulted from your inputs, so thank you to all who sent us those updates. As a token of our appreciation, we drew 12 names for a free e-Book for their choice. We will continue this tradition in 2022 so keep sending us those updates.

Who knows, you could be the next winner! Over 168 books have been won.

Dump Stations in Canada

What is a Dump Station?

"properly designed and constructed facility intended to receive the discharge of wastewater from any holding tank or similar device installed in any recreational vehicle, and having a means of discharging the contents, in an acceptable way, to an approved wastewater disposal system"

As you travel from one place to another; you will find this one meaning can have many ways of being described: sani-dump station, sani dumps, sanidumps, sani stations, rv dump stations, sani-station, sanitary station, sewage disposal, station de vidange, descargas del sani, décharges de sani, depositi di sani, dumps do sani, dump points, trailer dump stations, motorhome transfer points, and, of course, dump station.

Please be nice to our environment and dump at a proper facility.

Our standard for Big Rig Friendly is a 45 foot class A towing a trailer that does not have to be disconnect or back up when visiting a location.

About the Listings

This e-Book contains listing for 3,900+ sani stations. Each site would contain the following information:

- Name of the dump station
- Nearest town or city
- Driving directions from a major highway or land mark
- Address of the location if known
- GPS location if known
- Operating hours and seasonality information
- Availability of potable and non-potable water
- Price or user fee
- Any special conditions or restrictions

Our comprehensive lists includes: Private and public parks, non-park, free, pay, donation and commercial locations for dumping your gray and black holding tanks.

New Edition

This is our twelve edition and we made several additions based upon your feedback, namely:

- Major Audit:
 - When receiving thousands of updates and submissions each year we have a challenge when the same location can be subitted by different people for: different cities; different name; diffent address; other different details. We developed a tool to clean up the duplicates and now have a cleaner list of locations.
 - Testing of all the website addresses (URLs), as we do not control the location website there may be changes occuring during the year. A lot of website are changing their URL from a <http://> to the more secure <https://>
- Updated information:
 - Over 3000 updates including GPS coordinates, phone numbers, urls, etc. (2021)
 - GPS coordinates for many locations (2021)
 - Phone numbers (2021)
 - Website address (URL) (2021)
 - Big Rig Friendly (2021)
 - Propane (2021)

Our Plea

Many dump stations have closed this past year due to abuse and mistreatment. We know many of these have been abused by commercial ventures dumping chemicals and other effluent into the system but we also have witnessed many RVers not cleaning up after their own mess.

Please report any misuse of dump stations to the proper authorities. Please also take the time to thank the folks that provide this service for **"free"** by honouring them with your business or just thanking them. Also, please do not dump your tanks into State or Provincial park toilets as the septic systems are not designed process 40-60+ gallons. This is especially true for RVers that have macerator systems.

This is a privilege so lets protect it.

Our Mission: Make RVing Fun, Safe & Environmentally Friendly

• Open mid May through mid September
• potable and rinse water (non-potable) available

Carmacks **Sunrise Service Centre**
YT

Free with fuel fill up

Instructions on How to Empty Your RV Holding Tanks

Simple steps to dump your holding tanks successfully.

Caution:

Sewage contains many pathogens and bacteria that can be harmful if ingested or left on exposed skin for prolonged periods. Every care should be taken to minimize contact with the effluent at all times. Any exposed area should be thoroughly cleaned including hands, clothing, shoes, feet, tools, doors and latches and so on. Nothing is worse than not cleaning up and contaminating your steering too.

Remember, everyone reacts to such contamination differently. You may feel fine but your partner or your child may not. Sickness can ruin a good RVing experience.

Storing your tools:

Always try to store hoses and connectors in an enclosed, segregated place to avoid contact with any other items and avoid cross contamination. It is advisable to soak all these tools in a solution of bleach (1/4 cup per gallon of water) for 4 hours minimum at the beginning of each season to sanitize them. This is also good time to do a visual and leak test on the hose and replace it, if needed. Typical hose life is between 2-4 years as it can get brittle and scratched.

Pre-preparation: Have the right tools

Avoid dumping tanks that are not at least 2/3's full. If you have to dump, add water to the tanks till they become at least 2/3 full. This will help promote all the solids and particles to become suspended in the water and flow out of the tank. If you are going to travel before dumping, you can add some dish washing detergent (1/4 cup to a tank) and let it slosh around. Caution: Too much soap may cause excessive foaming!

Step 1:

Start by pulling up to the RV dump station and placing your black holding tank drain valve as close to the opening of the dump station as possible. This will ensure that if there is an accident, it will be contained in the dumping area. If your RV has more than one location for your drain valves, always do the black tank first. Unlock any compartments that you need to access for dumping the tanks.

Step 2:

Put on latex or other disposable gloves (to avoid any contamination) and get your sewer hose out. Before removing the cap to the holding tank drain opening, ensure both the gray and black water valves are both closed.

Step 3:

Always use an elbow and a hose ring to connect the sewer hose to dump station hole as this will hold the hose in place and avoid any splatter. If the ring or the elbow is not available, insert the end of the sewer hose into the dump station's hole about eight to twelve inches (if you only insert the hose a few inches the hose may come out when dumping the tanks and we don't want that!). Use the hole's cover, a brick, or something heavy enough to hold the sewer hose in place so it doesn't pop out of the hole (**Do not** use an object that could fall into the hole, you don't want a plugged dump station). **Many web sites mention Step 4 then Step 3; we do Step 3 first to prevent any accidental spillage.**

Step 4:

Check your sewer hose to ensure the hose is securely clamped to the adapter that attaches to the holding tank drain outlet. Remove the cap with the sewer hose underneath to catch any drips (open end up), when any drips have stopped, attach the sewer hose ensuring the adapter is completely attached. You can tell if it is when the tabs on the adapter are lined up with the stubs on the tank drain. A partially attached hose is more common than you think.

Step 5:

If you have a permanent-mount black tank rinse system, now is the time to connect it up to both the RV and the dump station water supply with a dedicated garden hose. **Do not** use your fresh water hose for the black tank rinse and **do not** turn on the water until the next step has started.

Step 6:

Once you are certain everything is secured, pull open the Black water tank valve first. You will hear the effluent rush through the hose, start to slow down, and finally become a trickling sound. Some solids may still stay lodged at the bottom of the tank as well as on the tank sidewall.

Step 7:

If you have connected a black tank rinse, turn on the water, let this run for two-five minutes to help remove solids left behind, then shut off the water and disconnect the garden hose. Now close the black water tank drain valve by pushing the handle completely closed.

If you do not have a black tank rinse system, you can fill the toilet bowl with water using the internal pump and water from your fresh tank. Ask your partner to flush the toilet to duplicate the action of black tank rinse system. You may need to do this twice. Please be sensitive if there is a line up at the dump station.

Step 8:

Now open the gray tank valve. As in step 6, you'll hear water flow, then slow, and stop. Close the gray tank valve. Repeat this step if you have more than one gray tank.

Step 9:

At this point, you're almost done. If you want to flush and rinse your tanks once more, you can do so by filling your tanks to 2/3 full (if you don't have a gray tank rinse system) and repeat the emptying process. If others are waiting to use the dump station, be courteous and skip this step.

Do not put non-potable rinse water into your fresh water system for this as it will contaminate your system and it will require complete sanitization.

Step 10:

Recheck that both your black and gray water tank valves are closed and then disconnect the sewer hose from your tank outlet.

Step 11:

Lift the end of the sewer hose (the end you just disconnected) to completely drain the hose into the dump station. If a non-potable water hose is available, run water through the sewer hose to rinse it out. Remove the sewer hose from the dump station hole and rinse the outside of the hose. Rinse the area around the hole to ensure that any spillage has been cleaned up and cover the dump station hole. Replace the tank outlet cover.

Step 12:

Return your sewer hose etc. to storage.

Step 13:

Dispose of the latex gloves into the garbage bin (we don't mean down the dump station) or put them in your garbage bin in the rig. Clean all the surfaces you touched when wearing your gloves with bleach wipes. Wash or hand sanitize your hands just in case the gloves leaked.

Step 14:

If there is a line up, move your rig to allow the next user to use the dump station and then check holding tanks display panel. If they do not read empty, this is an early sign that your sensors may be getting gummed up. Visit our site for an inexpensive environmentally friendly tip for solving this problem.

Step 15:

Now add about three to three gallons of water (about three full bowl flushes) to your black tank and then add the appropriate amount of holding tank treatment. If you use a treatment for your gray tank, do that as well. This will ensure that everything stays moist and healthy in the tank till your next trip.

Step 16:

Record any notes or updated information about the RV dump station to be submitted to *Sanidumps.com* for other RVers.

Step 17:

The task of emptying your RV's holding tanks is now finished.

Step 18:

Submit the updated or validation information to *Sanidumps.com* when you have an internet connection.

Step 19:

Enjoy your RVing journeys.

Happy RVing!

Dump Station Etiquette

By KC Chavda

Today, while many dump stations are free to use, some are starting to charge anywhere from \$2 to upwards of \$60+, and I am not talking about honey wagon service. In America many state-run dump stations at rest areas have been closed. The main reason for this is pure and simple: **ABUSE**. To be fair, non-RVers are also to blame, some dump toxic waste like commercial cleaning waste, to avoid paying handling fees.

Consider access to dump stations as a privilege not a right.

I am going to touch on what we can do to try to ensure this privilege continues.

Etiquette Rules

1. Report anyone abusing the dump station. They are compromising our privilege.
2. Always thank the operator/owner for letting us use their dump station. If possible reward them by purchasing something: fuel, supplies, meal.
3. Make sure that the dump station can accommodate your rig. For example, some dump stations require you to back in or back out, and for a Motorhome with a toad, this is a nightmare scenario.
4. Be ready to dump at the dump station.
5. Have the right equipment: hoses, connectors, elbows, extensions, ...etc
6. Always wear protective gloves (disposable are preferable) when dumping. Chlorine wipes are great to wipe off storage bin doors and latches if you have to touch them.
7. Make sure to pull up close enough to a dump station for both your sewer and flusher (non potable) hose to reach. This will avoid the need to move the rig during the dumping process.
8. Always connect the sewer hose to the dump station outlet first. Then hold the tank end of the hose under the cap as you open it to capture any leakage in the tank drain. This will avoid accidental spillage on the ground.
9. Do not fill your fresh water tank while dumping as it is highly likely you may contaminate your water supply. Also, you may block someone else from dumping as it takes 5-10 min to fill a typical tank these days.
10. Always clean up the area before you leave. Like good fisherman, leave the site cleaner than you found it. Do a walk about to ensure you have taken all your equipment. Wipe off any areas that may be contaminated with a chlorine wipe.

Just a moment, I think I have a fish on the line... Oh it's just a sunfish. Ah well it's only eggs and toast for breakfast.

Happy RVing!

Product Testing

In the spirit of making RVing, fun, safe and environmentally friendly, we have been testing products and services that will aid RVers in this quest. It is also one of our more popular sections of our website, which tells us as this is important to you too. Our approach to product testing is looking at products from RVers point of view (not comparing other similar products or performing a scientific test). Testing includes reviewing packaging, installation instructions, customer support, actual installation procedure and tips, product usage, any unstated benefit, and longer term usage. This provides us with initial and long term viability of products.

Disclosure

Some of the manufacturers of the products we test do advertise on our site or sponsor us at events and RV shows. We do provide the write-up to the manufacturers for review so that they can use the feedback for future enhancement and make suggestions for our testing and usage of their products. The comments and opinions expressed are purely based upon our experience with the products or services and are not influenced/edited/changed by the manufacturers or their representatives.

You can always tell us if you want us to test a product or want to add any additional information about a product we have tested by writing to us at info@sanidumps.com

Feel free to visit our site <https://www.sanidumps.com/product-testing.php> for additional products tested in the previous year.

Terms of Service

End User License Agreement

The Service

The following Terms of Service grants you access to the dump station eBook including all content and documentation (“Licensed eBook”), if any, delivered with it that are attached to or accompanied by this End User License Agreement. The purchase of a www.Sanidumps.com (“SANIDUMPS”) eBook is a license, not a sale of the licensed eBook or its content. You are granted personal, noncommercial use according to the terms and conditions of this Agreement. By accessing the licensed eBook, you do not become the owner of the licensed eBook. You do have the right to use it in accordance with the provisions of this Agreement.

Your use of the licensed eBook indicates your acceptance of the terms and conditions of this Agreement.

The License and Conditions

SANIDUMPS grants you a personal non-exclusive and non-transferable license to access the licensed eBook. You may reproduce and store portions of the licensed eBook content for your personal use, and noncommercial use. Full-scale reproduction of book contents is expressly prohibited.

You may not use the Licensed eBook on more than one computer system concurrently, make or distribute unauthorized copies of the Licensed eBook, create by decompilation or otherwise the source code of the Licensed eBook, or use, copy, modify, or transfer the Licensed eBook, in whole or in part, except as expressly permitted by this Agreement. If you transfer possession of the licensed eBook to a third party, the license is automatically terminated. Such termination will be in addition to any civil or other remedies available to SANIDUMPS.

The License Term

www.Sanidumps.com is continually adding, updating and enhancing the information and its delivery. It is highly recommended that you update your ebook periodically to access the latest information.

SANIDUMPS may, at its sole discretion, terminate or suspend your access to the licensed eBook for cause, including, without limitation, your breach of this Agreement, including for a violation of these terms and conditions. Upon such termination you shall immediately cease using the licensed eBook and will have no further rights under your registered use.

Terms of Use

- You are granted the right to access all content of the licensed eBook, for the term described above. You may also print pages of the eBook for your personal use and reference in connection with your course using the print function included in the program functionality. You may create and save bookmarks, highlights and notes as provided by the functionality of the program.
- You agree to protect the licensed eBook from unauthorized use, reproduction, or distribution. You further agree not to translate, decompile, or disassemble the licensed eBook.
- SANIDUMPS reserves the right to modify, add or remove content, features and functionality of

the licensed eBook at the publisher's sole discretion.

- You acknowledge that the use of the licensed eBook is for your personal use only. Multi-use configurations or network distribution of the licensed eBook is expressly prohibited.

Copyright

The entire contents of the licensed eBook and other material available through your registration are protected by copyright, unless otherwise indicated. Full-scale copying of licensed eBook contents is expressly prohibited. You may not remove, delete, transmit or create derivative works from any of the licensed eBook content. No part of any chapter of any book may be transmitted in any form by any means or reproduced for any other purpose, without the prior written permission from SANIDUMPS except as permitted under relevant fair dealing provisions. Any other use violates this Agreement and is strictly prohibited.

All interfaces, look and feel, navigation schemes, designs and program features and functional of the Licensed eBook are the property of SANIDUMPS and may not be copied or reproduced or used in derivative works.

DISCLAIMER

RV Toilet Paper Test (TPT)

*Easy
Do It
Yourself*

RV Toilet Paper Test

*Find out if the
toilet paper you use is
'RV Friendly'*

- Canning jar with lid
- 1 Cup of water

- Toiletpaper
- Shake
- Wait 12 hours
- See results

Sanidumps.com

Have you ever wondered about what type of toilet paper you should use in your RV?

Have you heard that you can only use single ply RV toilet paper?

We did! And we wanted to find out more for ourselves.

Steps for a TPT

- Grab a canning jar with a lid
- Pour in one (1) cup of room temperature water
- Place one (1) sheet of TP in the canning jar with the water
- Tighten the lid and give the jar one (1) shake
- Let stand on the counter for one (1) hour
- Check the jar every few hours to see how the TP is braking down, there should be significant results within 12 hours
- Extra shaking of the jar isn't required, your RV isn't doing a lot of shaking unless you are traveling along a very curvy road

Expected results will vary. Some three (3) ply TP will break down faster the one (1) ply TP. Some RV brands of TP do not break down very well at all while others break down very quickly. Some TP brands that were originally 'RV Friendly' are no longer 'RV Friendly' due to the manufacture changing something in how it is manufactured.

We have found that 'RV Friendly' toilet paper is the best TP for the RV.

RV Toilet Paper Test (TPT) Results

We have tested multiple different brands of toilet paper. Below are some images of our own toilet paper tests. One brand of TP breaks down very well and is 'RV Friendly' compared to the other Non 'RV Friendly' brand.

**'RV Friendly'
Toilet Paper** >

RV Friendly TP

What Makes a Toilet Paper 'RV Friendly'?

It will...

- Break down quickly
- Tendency not to stick on holding tank walls
- Have a comfortable feel
- Reasonably priced

Sanidumps.com

What makes a toilet paper 'RV Friendly'?

In our experiences a 'RV Friendly' toilet paper will break down quickly (less than two days) without a lot of agitation (shake only once), it does not have a tendency to stick on the walls of the holding tank (after doing hundreds of demonstrations we noticed that some TP has a tendency to stick to the jar side walls), it has a comfortable feel for use, and it is safe for septic tank systems. Oh yes, it also has to be reasonably priced.

Toilet Paper Test Conclusion

There are many brands of toilet paper that can be called 'RV Friendly' that aren't necessarily advertised as an RV toilet paper, and some TP that is advertised as RV toilet paper but does not pass our TPT. We encourage you to do your own test and select an appropriate brand that meets your needs and budget.

Another factor that should be considered is the tendency of the TP to stick to the side walls of the holding tank. After doing this demonstration many times we have found that some TP has a greater tendency to stick to the side walls which will cause your holding tank sensors to read incorrectly (Hint - fill the holding tank with water until full before flushing whenever possible or dump when more than 2/3 full).

The *Sanidumps.com* Team has been doing these TPT's for many years at RV shows, seminars and rally's and it is amazing the number of RVers that are very interested in the results of the TPT.

Happy RVing!

Toilet Paper 1857

American [Joseph Gayetty](#) invented toilet paper in 1857. Gayetty first marketed toilet paper on December 8, 1857 which originally sold for US\$0.50 in packs of 500 bearing a watermark of his name.

Update November 2012

I have now tested over thirty different brands of toilet paper and retested some brands that had tested before that now have a new and improved version of their previous toilet paper. I have also been demonstrating how to do the RV Friendly toilet paper test for many years at RV shows, rallies, and dealer events.

I now know that I can not trust the labeling on the toilet paper packaging. Why?

I've tested RV brands of toilet paper that do not break down with the RV Friendly test and that there are RV brands that do break down very well. There are brands of toilet paper that are label 'safe for septic tanks' and once again I have found brands that are RV Friendly while others that are not RV Friendly. There are brands that are not labeled as septic tank friendly or as a RV brand that do break down very well with the RV Friendly test. I have also found that the number of ply's the toilet paper has nothing to do with the results, there are three ply TP that break down better than one ply TP.

I'm left with the conclusion that you must test the toilet paper to see if it is RV Friendly as the labeling and number of ply's has nothing to do with the results of a RV Friendly TP test.

John Clarke - Sanidumps.com Team

Update June 2013

While presenting RV seminars at a RV show, I met Jason and Nikki of [Gone With the Wynns](#). Nikki asked if I had tested the [Seventh Generation](#) toilet paper? I have tested over thirty brands but Seventh Generation was not one of the brands tested.

I then contacted Seventh Generation and asked if they would supply some toilet paper for testing, the RV Friendly TP test. Sefton Hirsch with Customer Service promptly sent off some TP for testing.

I have now completed several tests (looking for repeat results) and have found that the Seventh Generation toilet paper does break down quickly and does not have tendency to stick on test jar walls. The TP is also reasonably priced when ordering in larger quantities. The fourth test, 'your spouse should like it', well that's is a personal item which only your spouse can answer.

Update March 2020

I have now tested about 40 different brands (over 14 year span) of TP. Some interesting findings are that some TP that has tested RV Friendly before no longer test RV friendly :-(so remember to retest your TP every year.

I'm also seeing more and more YouTube videos stating that you must use RV TP for your RV. Obviously they have never tested TP and have not seen this webpage.

I have tested different RV TPs that are RV Friendly and NOT RV Friendly, so a label stating it is RV TP has little value if it is OK for RV use.
